Happy 73rd Independence Day, Indonesia!

17 August 2018

Dear readers,

with this new edition of our Newsletter we would like to inform you about the current and planned activities of our DAAD branch office in Jakarta and about the DAAD's funding programmes for Indonesia.

Besides this, this edition puts a special focus on our DAAD alumni and alumnae – those of you who have, with the help of the DAAD's scholarship programmes, completed study or research stays at German universities, in many cases finishing with a Master or PhD degree or with scientific publications. Indonesian and German universities are looking back on many decades of good and fruitful partnership, and more than 3000 DAAD alumni from Indonesia are clear proof of this wonderful relationship. Many of our alumni are now working as professors or lecturers at universities all over nusantara, others in industry and business or in the administration. And many have become members of our DAAD alumni associations, which are active in different places all over Indonesia.

The DAAD wishes to stay in contact with its former scholarship holders and has developed several programmes which allow the partnership between the DAAD and its alumni to be maintained and developed. As an example, our DAAD office in Jakarta organizes regular alumni meetings all over Indonesia. DAAD alumni and alumni associations can apply for funding of alumni meetings which they themselves organize. Via special funding schemes, DAAD alumni can apply for specialist literature and, in some cases, for equipment donations. In the context of the DAAD's Re-Invitation Programme, former long-term scholarship holders are eligible for a study stay of up to 3 months at a German university or research institute, in some cases also at institutions of the economy, administration, media and others. You will receive more information on this on the next pages.

In the name of our whole DAAD team I wish you a pleasant reading! Please feel free to contact us anytime in case you would like to get more information or just address questions and suggestions to us.

Best wishes,
Thomas Zettler

Get to know more about the DAAD alumni in Indonesia

Origin of Indonesian DAAD Alumni (%)

Origin of Javanese DAAD Alumni of Indonesian Alumni (%)

Main Fields of Study of Indonesian DAAD Alumni (%)

Top Ten Study Destinations for Indonesian DAAD Alumni

Over the last few decades DAAD Indonesia has established a wide alumni network. More than 3,000 Indonesians have spent some time in Germany, where they have studied, undertaken research, and for the most part also learned the difficult German language. By doing this, they have actively engaged in the exchange of academic cultures across nations, institutions and subjects.

But who are these Indonesians who left their familiar surroundings and went to an unknown country? In the charts on the left one can see the origins, the main fields of study, and the top ten study destinations in Germany of Indonesian DAAD alumni between 1990 and 2018.

More than 54.85% of all Indonesian DAAD alumni have their origin in Java, whereas only around 0.1% call Papua their home (Chart 1). Due to the large number of Indonesian DAAD alumni having their origin somewhere in Java, a separate chart shows which areas these alumni come from. Almost half of the Javanese DAAD alumni have their origin in West Java, with Jakarta in second place (Chart 2).

Engineering is the most commonly studied field for Indonesian DAAD alumni, being chosen by 24% (Chart 3). Also very common amongst Indonesian DAAD alumni are the fields of mathematics and science, which are studied by more than 17%. A comparatively small number of around five percent opt for law and economics.

The most favoured study destination in Germany for Indonesian DAAD alumni is Göttingen (Chart 4). Next is Berlin, the capital and largest city in Germany. Berlin is followed by München or Munich, the city with its world famous football club. In fourth place comes Aachen, the city where the former Indonesian President, Prof. Dr. -Ing. Bacharuddin Jusuf Habibie spent 10 years of his life and received his *Doktor der Ingenieurwissenschaften*.

Interview with two DAAD alumni

Name : Dr.rer.nat. Ir. Agus Wijaya, M.Si.
 Scholarship programme : Research grants for doctoral programme in Germany, Max-Rubner Institute and Karlsruhe Institute of Technology 1998-2003
 Occupation : Lecturer and researcher Faculty of agriculture, Universitas Sriwijaya, Palembang, South Sumatera

What benefits did you get from the DAAD scholarship?

Like a few other countries in the world Germany offers a complete package to finance your studies. DAAD provides you not only with a scholarship to cover your living costs, but also a subsidy for spouse, children and apartment rental. In addition, DAAD grants you subsidies for books and other things. During your German language course, DAAD reimburses the transport cost to visit your Doktorvater. Also, if you want to visit your family in your home country, DAAD has a budget. Moreover, after completing your studies, DAAD has numerous programs to support their alumni. Besser geht's nicht!

How did you get to know DAAD?

When I was a Master student at UGM, I made friends with a guest professor from Uni-Frankfurt, Germany, named Prof. Dr. Habil. Hans-Joachim Freisleben. He gave me the scholarship information from DAAD and even found the right Doktorvater for my field. Ever since we have been good friends, and I am also good friends with his family.

Did you return to Indonesia right after your studies or did you work for a while in Germany?

Yes, I returned to Indonesia right after my studies because I already had a permanent job as a university lecturer (since 1993) at Universitas Sriwijaya.

Why did you decide to continue your studies in Germany?

I got the information 3 months before the deadline for application, but I hesitated about whether I should study in Germany. This was because of the consequences: I must learn a totally new language; one I had never learned in school. Two weeks before the deadline for scholarship application, I received a letter from my future Doktorvater stating that he was ready to accept me as his Ph.D. student. That was the crucial point! Right away I completed all the paperwork needed to apply for the scholarship. A few months later I had an interview in Surabaya which was followed up quickly by good news: I had the scholarship! In the meantime, I was still in the final stage of finishing my master study.

Do you have any advice for future students who want to study in Germany with or without a DAAD scholarship?

Live your dream and open your mind! You should master the German language because it is a beautiful language. Study not only your field, but also learn the German culture. And remember, Germany is the land of thinkers and poets, where science, technology and art live in harmony.

Please tell us about your study experiences in Germany!

In early April 1998 we landed at Frankfurt Airport and headed to Mannheim for a German language course. I was amazed to see Mercedes Benz taxis at the central station. I think the most memorable time was during my German language course. I had the possibility to make friends with many people from all over the world. Later in my lab-work, I learned about team work, and at the same time focused on my research topic by working independently. I felt the warmth of friendship with the people in my lab. We were just like a family! Study and research in Germany widened my network.

Excursion with my Doktorvater and colleagues

Daily activity at our research lab

Name : Nova Maulani, M.Sc.
 Scholarship programme : Sustainable Water Management (NaWaM),
 Universität Duisburg-Essen
 2013 - 2015
 Occupation : Researcher and consultant
 Project partner of Yayasan
 Indonesia-Jerman

How did you get to know DAAD?

A friend of mine told me about DAAD when he was preparing the application for my studies abroad. I went to the DAAD website and found the information regarding the scholarship programmes. I did some reading from the list of scholarships and learned more about the programmes I was interested in.

Why did you decide to continue your studies in Germany?

The academic programme I chose (Water Science at University of Duisburg-Essen) offers comprehensive knowledge and practical skills that were related to my previous background. Since the university offered a range of English-taught courses, I didn't need to bother too much about the language. But still, I learned German as a foreign language. German universities provide top quality teaching and research facilities. Moreover, they are recognized internationally, giving me excellent prospects for a global career. Study in Germany was a great opportunity for me to improve my expertise. The cultural atmosphere in Germany supports the academic and personal life of international students. Also important was that in my spare time I was able to explore other regions in Europe, owing to the strategic location of Germany.

Please tell us about your study experiences in Germany!

The curriculum of my courses was mostly different to that of colleges in Indonesia. In general, the attendance of students to class was not mandatory, except for lab work. The students were given the freedom to attend classes or not. In the class, the teaching style was very open and warm, both in a small or large classrooms. The lecturer often opened discussion sessions and the students had more time to ask or discuss a certain topic. There are only final exams, without mid-term tests. The grade points are a scale of 0-100 and converted to the German Grade System of 1-5 with 1 as an outstanding achievement and 5 a fail. If one does not pass an exam, they are given two other chances to repeat the exam; the last one is an oral test. German people usually prepare for their exams 1-2 months before. They are diligent and workaholic, but know how to balance their professional and personal time. One thing that surprised me was when

many students brought travel suitcases to the campus, inside of which were stacks of books borrowed from the library. Living as a student has many benefits. Students can live in dormitory at a cheap cost. The student card can be used to get meals at reduced prices in the canteens or cafeterias on campus. In some areas of Germany e.g. North Rhein Westfalia, the student card functions as semester ticket to get free access to certain forms of public transportation across the whole state. Students have full of access to download subscription paid scientific journals and specific software is used to help them complete the assignments. Studying in Germany with classmates from different countries was a wonderful experience. I learned about other countries and their cultures. The many challenges I faced during my stay in Germany made me come to know more about myself, learn how to solve problems and learn to see things from another point of view.

What benefits did you get from the DAAD scholarships?

I received monthly installments and additional subsidies for research costs. DAAD provided an intensive German language course for 4 months (or more, depending on the scholarship program) prior to study, and a free voucher to take an official German language test. DAAD regularly conducted annual meetings for scholarship holders so that we could meet and find new friends from around the world. For special programs, DAAD also invited us to certain seminars or exhibitions related to our study programme in order to exchange or update our knowledge and expand our professional network. All accommodation and transportation was arranged by DAAD. As a DAAD scholarship holder, I found it easy to process administration arrangements, such as the visa application, campus enrollment, resident permit and city registration in Germany. For my studies I was supervised by a professor directly recommended to me by DAAD. If you are married DAAD can provide a family allowance to bring along your spouse and children. Health insurance was also covered by DAAD, including visits to the general practitioner, dentist, and specialist. It was my experience to have hand surgery in a private hospital in Germany, and all expenses were covered. For alumni, DAAD has many programs as well, such as re-invitations for doing research in Germany, funding opportunities, and regular meetings and events.

Did you return to Indonesia right after your studies or did you work for a while in Germany?

After finishing my study, I completed internship for 3 months at a research organization in Germany, Fraunhofer Institute for Environmental, Safety, and Energy Technology. There was an offer to continue my studies in the doctoral programme in the same

faculty. Because I was looking for another interesting topic, I decided to return to my home country first.

Do you have any advice for future students who want to study in Germany with or without a DAAD scholarship?

Learn about the program you want to apply in detail, and do not hesitate to send emails to the professor if you have questions concerning the academic content that is not listed in Q&As. If you want to apply for a DAAD scholarship, follow all the instructions including the requirements, deadline, etc. If necessary, consult with the DAAD team. Even if you choose English-taught courses, it is necessary to have a knowledge of basic German to communicate with German people in daily life. Each university offers German courses for foreign students. Almost all public universities in Germany do not apply tuition fees. For living costs, my classmates without scholarships supported themselves by doing part-time jobs either in private companies or in universities as research assistants. However, this requires a good time management between study and work. To survive as a student in Germany it is good to prepare both physically and mentally. At first you will feel homesick, being far from family. But do not worry as Indonesian friends in Germany can be your family. Learning about German people and their culture is the best way to blend in quickly. To enjoy your stay in Germany, follow the common rules that apply and try to adapt to the way they live without losing your identity.

Excursion with my classmates

DAAD's funding programmes for international alumni

The DAAD sees the end of a scholarship or period of support as the beginning of a long-standing active relationship with its former scholarship holders (alumni). To preserve the ties of former scholarship holders and to establish an active and steadily growing global network, the DAAD offers its alumni support after their scholarship or grant has finished. The following programmes are available :

1. International DAAD Alumni Seminar

This programme is offered by the German Academic Exchange Service (DAAD) in the framework of the Alumni Special Projects. The target-group participants come from a broad range of regions and professions. According to the alumni, a large number of them stay in touch with each other, the German higher education institutions, and business partners through this programme. In other words, the Alumni Seminar programme is successful in helping alumni continue their education, exchange ideas, and establish contacts in the academic and professional community.

Contact person:
Ribka Gloria
ribka@daadikt.org

Dr. Dian Handayani, Universitas Andalas, Padang

I know this programme from friends who are DAAD alumni, and who contacted me via email. More information about the DAAD Alumni Seminar and how to apply for the grant, was obtained from the DAAD website and from the DAAD staff in Jakarta. There are so many benefits that I experienced by joining DAAD alumni seminars. I can continue to update my scientific development in my field, and together with my institution have easy and beneficial access to establishing research collaboration and student exchange between the German institutions. Every year, I have had two to three opportunities to attend international seminars sponsored by the DAAD throughout Indonesia at no cost to me.

2. Re-invitation programme

The aim of this program is to enable former scholarship holders to carry out research and work projects in Germany and to maintain contacts as part of DAAD's global alumni network. The target groups are former holders of DAAD research grants or study scholarships who were funded for a period of over six months, and former East German scholarship holders who studied for at least one year in Germany. The research and working projects are to be carried out at state or state-recognized institutions of higher education or non-university research Institutes in Germany. Working stays in a business, in administration, culture or media can also be funded for former scholarship holders who work outside the science sector. A research or working visit can also take place at several host institutions. Funding may only be claimed once within three years.

Muji Rahayu
muji@daadikt.org

Dr. Epi Taufik, S.Pt., MVPH., M.Si., IPB, Bogor

Actually, I got the information about DAAD supports for its alumni from my seniors at the faculty/university, before I studied in Germany. I realized that I would have a chance to revisit Germany through Wiedereinladung/ re-invitation programme. So, this re-invitation programme was familiar to me, even before I got the DAAD scholarship itself. There are many benefits, both for me personally, and for my institution. The re-invitation programme that I completed in 2016 was the first time I participated in this programme although I had graduated in Germany in 2007 (editor's note: Development-Related Post-graduate Courses Programme). This happened because I had to take my PhD programme in another country finishing in 2012. Consequently, my participation was a kind of nostalgic event. Apart from upgrading my knowledge, the visit was really meaningful for me because I was able to meet again with my professors, colleagues and friends from my alma mater. We were able to strengthen our collaboration network and continue our cooperation. I hope I will have the opportunity of taking this program to follow up the cooperation we set up before. That established scientific collaboration is important for my institution, as it adds to our practice of collaborating with German partners. I hope DAAD will continue to support me in strengthening the collaboration between my institution and our partners in Berlin.

3. Material Resources Programme

DAAD administers an equipment donation programme funded by the Federal Ministry for Economic Cooperation and Development (BMZ). With the Material Resources Programme, alumni will have the opportunity to obtain equipment and consumables in their home country and be able to continue the research work in their institutions in Indonesia, which they may have started in Germany .

Contact person:
Ribka Gloria
ribka@daadikt.org

Prof. Dr. Mudrik Alaydrus, Universitas Mercu Buana, Jakarta

I received regular information from DAAD by e-mail, so I was well informed about the actual programmes DAAD offered. From the e-mail links I could explore additional information at the DAAD website. I found the Material Resources Programme and followed up by asking DAAD staff in Jakarta. The equipment obtained through this programme is very essential for our research. With measurement instrument we can study the important characteristics of many telecommunication components, such as antennas, filters and amplifiers.

4. Scientific Literature Programme

DAAD Alumni can apply once a year for specialist literature (books, journals, articles) produced by German publishers to help them advance their academic knowledge and qualifications (maximum value of € 200 per year). As a rule, the applications should be submitted online by going to the [Alumni Service Area](#). This gives you the advantage of enabling you to easily check literature databases to find out about the delivery status, price, and so on, of any specialist literature which interests you.

Contact person:
Ribka Gloria
ribka@daadikt.org

Dr. Hawis Madduppa, IPB, Bogor

I discovered the programme at the Annual meeting of DAAD scholarship holders in Bonn around 2011. At that time DAAD presented information about the funding programmes for its alumni. There are many benefits I obtained from the Scientific Literature Programme. For example, I can get access to books which are usually expensive or unavailable in Indonesian bookstores, I can enrich my students with new references, and support my current research programme as well.

5. Alumni Meeting

DAAD organizes Alumni meetings to enhance its alumni networks. Alumni meetings are usually held as seminars/ conferences, or involve presentations and discussion. Usually a joint dinner of all alumni. Small-scale alumni meetings are usually held 4 times a year in 4 different cities across the country. DAAD Regional Office Jakarta organized a large-scale alumni meeting under the theme "Getting Ready! The Importance of the Indonesian University Landscape for ASEAN ", in conjunction with the 25th year anniversary of DAAD in Indonesia, which was held in 2015, supported by the Embassy of the Federal Republic of Germany. We invited our alumni scattered throughout Indonesia to attend this magnificent event. One of the alumni of DAAD who gave a speech was the former President of Indonesia, H.E. Prof. Dr.-Ing. B.J. Habibie.

Contact person:
Ribka Gloria
ribka@daadikt.org

Dr. Med. Ir. Fahmi, MSc, IPM, Universitas Sumatera Utara, Medan

During a visit from the German embassy to Medan to meet the Mayor, we, the DAAD alumni were invited to join and meet with representatives of DAAD Jakarta. That was our first contact with DAAD Jakarta, and after that we always received notifications about alumni activities in Indonesia, including the 25th year anniversary of DAAD in Indonesia in 2015. I found it a very interesting event where I could meet old friends and colleagues from around the country. It was a good opportunity to create networking, share information and ideas about how to foster collaboration between scholars, since most of the alumni work in universities. The meeting with Pak Habibie during the event was pleasant, intimate and inspiring.

Maya Safira, S.Si, MBA, Oxfam

I learned about the alumni meeting from the invitation email sent by Pak Ivan from the DAAD in Jakarta. I love seeing people, getting to know new friends for networking, and also getting connected again with the alumni. We also usually share information about what we are working on at the time. As a result we are more likely to find a particular expert when we need them. Moreover, it would also be good if DAAD could organize these in a more fun format, such as by inviting bands, and holding them in more fun venues (e.g. lounge, big cafe).
